

One of our DPP solutions

We are pleased to offer a fully integrated Digital Product Passport (DPP) solution that not only takes the pain out of generating the DPP, but offers our clients a secure independent hosting domain to ensure the DPP data can be accessed for the life of the product. The DPP can be built from a simple data upload, or for the same fee, use the full functionality of the Bombiix platform (leveraging the inclusive PLM and DAM features). The DPP can be fully customised to meet your brand needs. While it meets the minimum EU requirements for the DPP, it offers much more to build brand connection with your customers. We have partnered with a recognised LCA provider to offer fully integrated product impact assessments. If you are looking for an integrated DPP solution, contact the product-focused expert team at Weavabel who are collaborating with Bombiix to provide this solution.
