

# Poly bag recycling loop

## Weavabel warehouses

Poly bags produced globally are made available from our warehouses for factories to order from their nearest location.

## Garment factory

Garment vendor purchases poly bags from a Weavabel global location. They pack garments and ship to distribution centres.

## Processing

Poly bags undergo polymer processing and blending. Then they are pelletised for film blowing in our production plant.

## Distribution centres

Brands collect poly bags from stores and return them to a distribution centre, where they are sorted and baled with DC waste.

## Sorting

Poly bag waste is sorted, shredded and processed before being shipped to a licensed importer.

## Recycling trucks

Weavabel collect baled waste per truck load, consolidating waste in EU/UK for recycling.
